

Application Performance Management (APM)

Starter Package

At a glance

Why codecentric APM Starter Package?

- Instana trial license for 14 days
- Support during installation
- 4 days of consulting
- One-time offer price (incl. all consulting services): 7,000 EUR net, excl. travel expenses

Modern microservice architectures and containers (such as Docker) are the foundation of large IT landscapes today. Without a doubt, this technology brings numerous advantages, but on the other hand increases the complexity of monitoring significantly. Our team has years of hands-on APM experience and specializes in finding problem-causing components in complex environments at record speed.

codecentric paves the way for your entry into APM. With our Starter Package, you will not only get to know the APM tool Instana, but also the positive effects that can result from active and sustainable performance management. In addition, we provide technical experts to support you in your initial and test phase and are happy to accompany you as a long-term partner in this area.

What does the APM Starter Package include?

Our services:

- Instana trial license for 14 days
- 1 day consulting at your site (remote if desired)
- 3 days of remote consulting:
 - installation
 - training
 - active monitoring and detection of existing performance problems by Instana
 - active consulting and development of solution proposals

Modern cloud / microservices applications consist of hundreds or thousands of instances at runtime. Therefore, when it comes to APM, there is no alternative to using a tool that was built exactly for this purpose. After all, we don't want to use a hammer on screws. –
Thomas Scherm,
Proxy, codecentric AG

Why Instana?

Instana has been developed to specifically meet the requirements of current technologies and techniques applied in IT.

Instana automatically analyzes and visualizes dynamic applications and generates an accurate image of the application landscape, as well as existing dependencies. Automatic detection continuously takes place in Instana, so that code changes, deployments and re-configurations are detected immediately and automatically, analyzed and displayed in Instana. As a result, Instana knows the exact state of applications, services and infrastructure at all times. All data is recorded, processed and displayed in the interface within a few seconds.

In addition, as part of the full-stack monitoring provided by Instana, all requests are tracked end-to-end, which allows for statements about the quality of the developed services to be made at any time.

Your benefits

- Get started right away with a minimum installation and configuration phase.
- Test Instana on your premises without obligation.
- codecentric supports you remotely with regards to all technical questions during the entire 14-day trial period.
- Benefit from our many years of APM expertise.

Once you have convinced yourself after the 14-day trial period and would like to continue to rely on the right APM solution in the future, you will have the option to take over the licenses and further expand the results from the test phase.
